### The 2019 Cloud Security Threat Report (CSTR)

Get the inaugural report and learn how organizations are adapting to evolving cloud threats, probing issues such as visibility, loss of control of data, and immature security practices.

Findings:

- Seventy-three percent of firms had cloud incidents due to immature security.
- Sixty-three percent of security incidents have occurred in the cloud in the past 12 months.
- Sixty-nine percent of survey respondents think their data is likely already on the dark web for sale.

### New! Create Policies Based on Anomalous User Behavior

You can now create policies based on detectors of anomalous user behaviors such as anomalous activity times or logins, anomalous variety of activities, or anomalously large volumes of data. For more information see the *Responding to Incidents with Protect* section of the **Using the Detect App** Tech Note in your CloudSOC Knowledge Base.

### On-Demand Webinar - How to Build a Cloud Center of Excellence

Gartner security industry analysts recommend the establishment of a Cloud Center of Excellence (CCoE) within every organization, as represented by a cross-functional team of people responsible for developing and leading cloud strategy, governance, and best practices. While Gartner and other sources offer high-level strategy ideas for organizations, this webinar is intended to be more tactical with real-world examples and suggestions for execution.
