

Latest Product Updates Symantec CloudSOC

Symantec CloudSOC Gateway certificate change

On Dec 12, 2019 the certificate authority (CA) certificate used for Symantec CloudSOC Gateway will expire. Due to the expiration of the certificate in December, we are aiming to change our CA certificate on November 7th, 2019. The certificate contains the same security properties as before and will be required for encrypted traffic interception by "gw.elastica.net" and "mgw.elastica.net".

More detailed information is available in this KB article.

Broadcom purchases Symantec Enterprise Security assets

We recently announced that Symantec has entered into a definitive agreement under which Broadcom Inc. will acquire Symantec's Enterprise Security assets. Like Symantec, Broadcom has a strong focus on building deep customer relationships and driving cutting-edge innovation – as demonstrated by its track record of creating and enabling some of the world's most sophisticated technology offerings. By combining with Broadcom, we believe that Enterprise Security will be even better positioned to execute on our integrated cyber defense strategy.

Your Symantec CloudSOC engineering, product management, technical support, and other core teams all want to express our enthusiasm for this bold new move, and our customers will remain our dedicated focus throughout the integration planning process. As always, thank you for your continued trust, business and partnership.
