**Latest Product Updates**
What's new in Symantec Data Loss Prevention

Introducing DLP Data Access Governance

Comprehensive data security and governance of unstructured data for file systems and SharePoint

- Discover how data is being used, who owns it, and who has access to it
- Assess open access to shares, folders, and files and identify over-exposed data
- Gain control over excessive user permissions to sensitive files and implement a least privilege access model
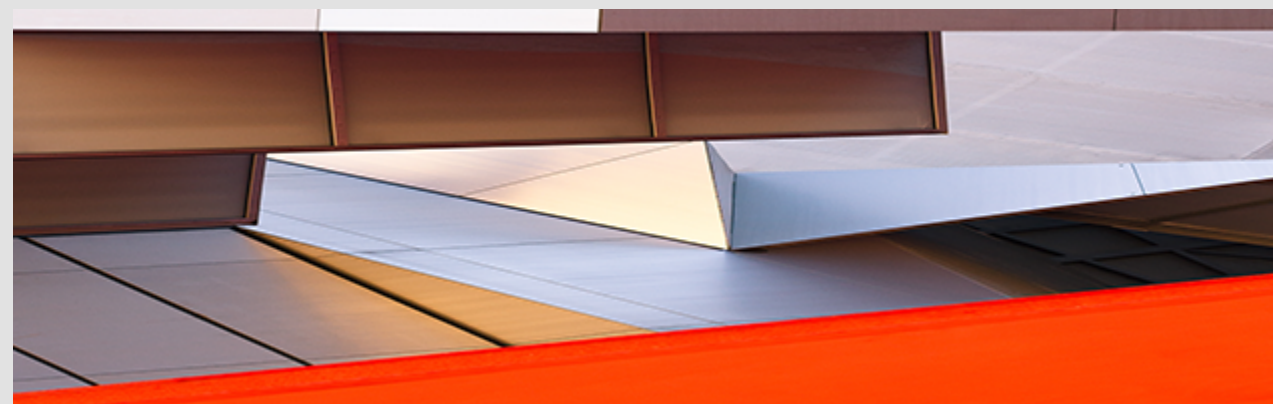

[**Download the data sheet**]

Identify true data owners with DLP Data Access Governance

Discover the most probable data owner, based on who actually uses the file, to make faster, better incident remediation decisions in DLP Enforce.

Gain visibility of the data owner's contact information via multiple layers of context, including common managers, content creators, and most active users.
